# My role in this research:

- ✔ Conception and design of the work/project
- ✔ Analysis and interpretation of data
- ✔ Creation and/or critical review of the presentation

# Background

The projected number of people with age-related macular degeneration (AMD) in 2020 is 196 million, increasing to 288 million in 2040\*.

**Geographic atrophy (GA) is characterized by loss of retinal photoreceptors, RPE, and choriocapillaris.**

# Purpose:

To determine associations of systemic medications with the incidence and growth of GA in participants of the Comparison of Age-related Macular Degeneration Treatments Trials (CATT)

Scheie Eye Institute

Penn Medicine

# Exposure:

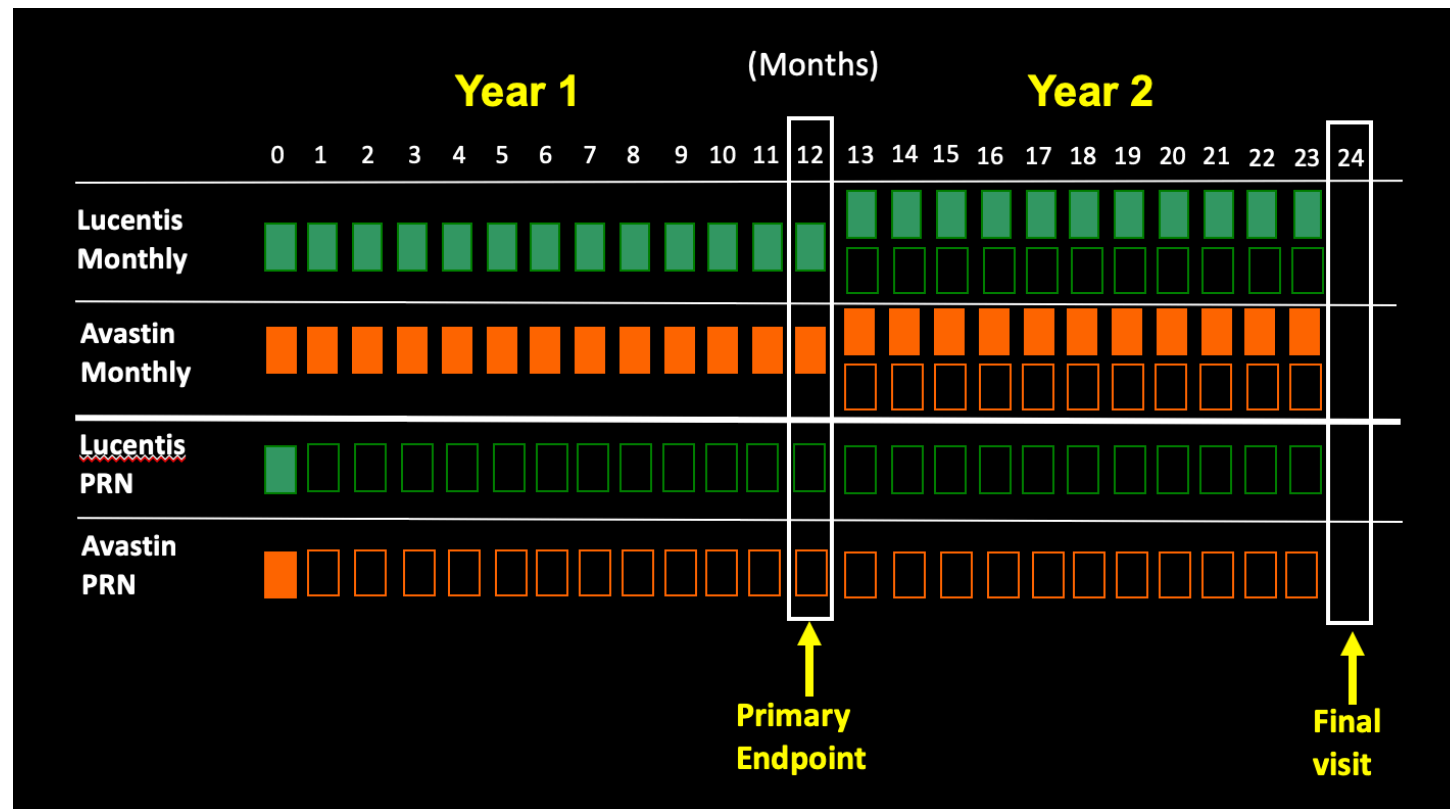

## Systemic medications

- Cholinesterase inhibitor
- ACE inhibitors
- Calcium channel blockers
- Beta-blockers
- Diuretics
- Aspirin
- Steroids
- Statins
- Hormone replacement therapy
- Antacids
- Drugs targeting G protein-coupled receptors.

# Methods:

- CATT is a multicenter, prospective, noninferiority, clinic trial evaluating the safety and efficacy of ranibizumab or bevacizumab in the treatment of exudative AMD.

Scheie Eye Institute

 Penn Medicine

# Methods:

- The GA was defined as a partial or complete depigmentation of one or more patches  $\geq 250 \mu$  in longest linear dimension in the macula in the color fundus photos.
- The area of individual GA lesion was measured manually with Image J.

Scheie Eye Institute

 Penn Medicine

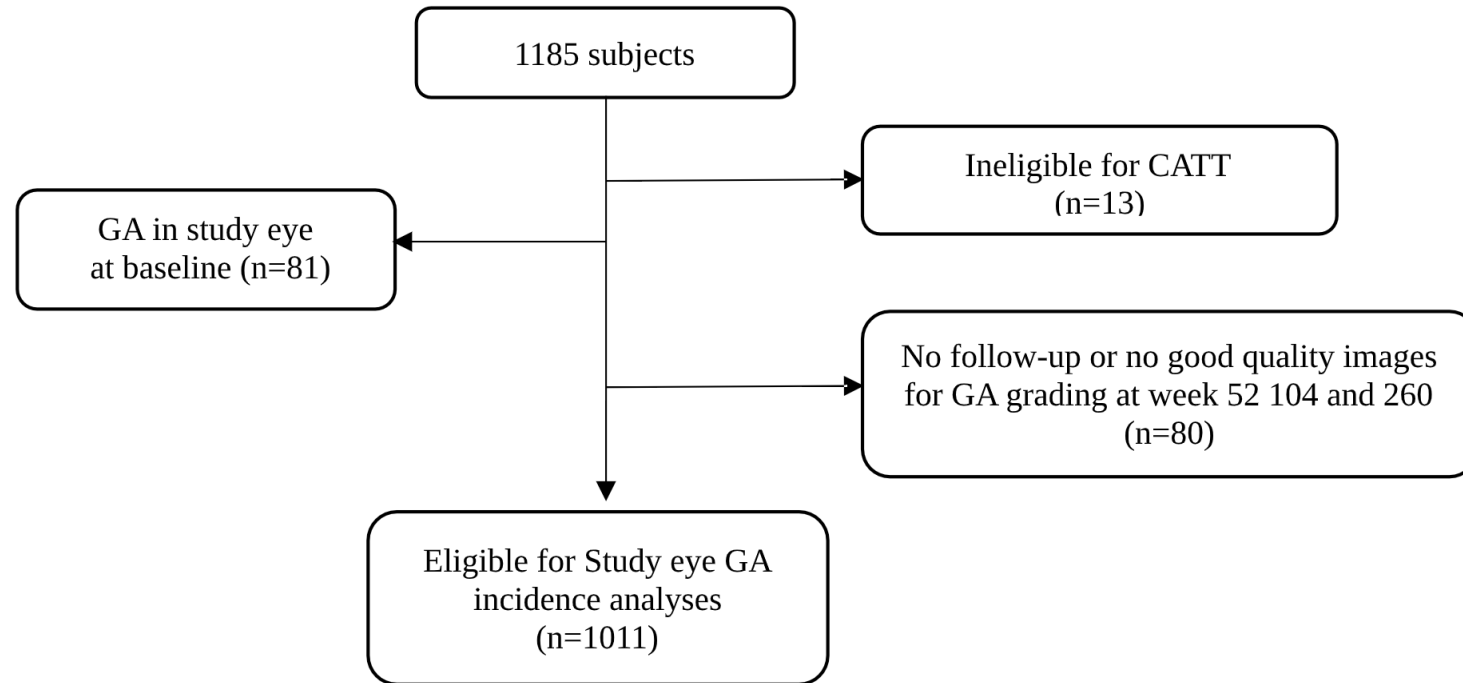

# Methods:

- Univariable and multivariable Cox regression models were used in assessing the association between systemic medication and GA incidence.
- Univariable and multivariable mixed effects models were used in assessing the association between systemic medication and GA growth.

# Results:

## Flow chart for the study eye GA incidence analysis cohort

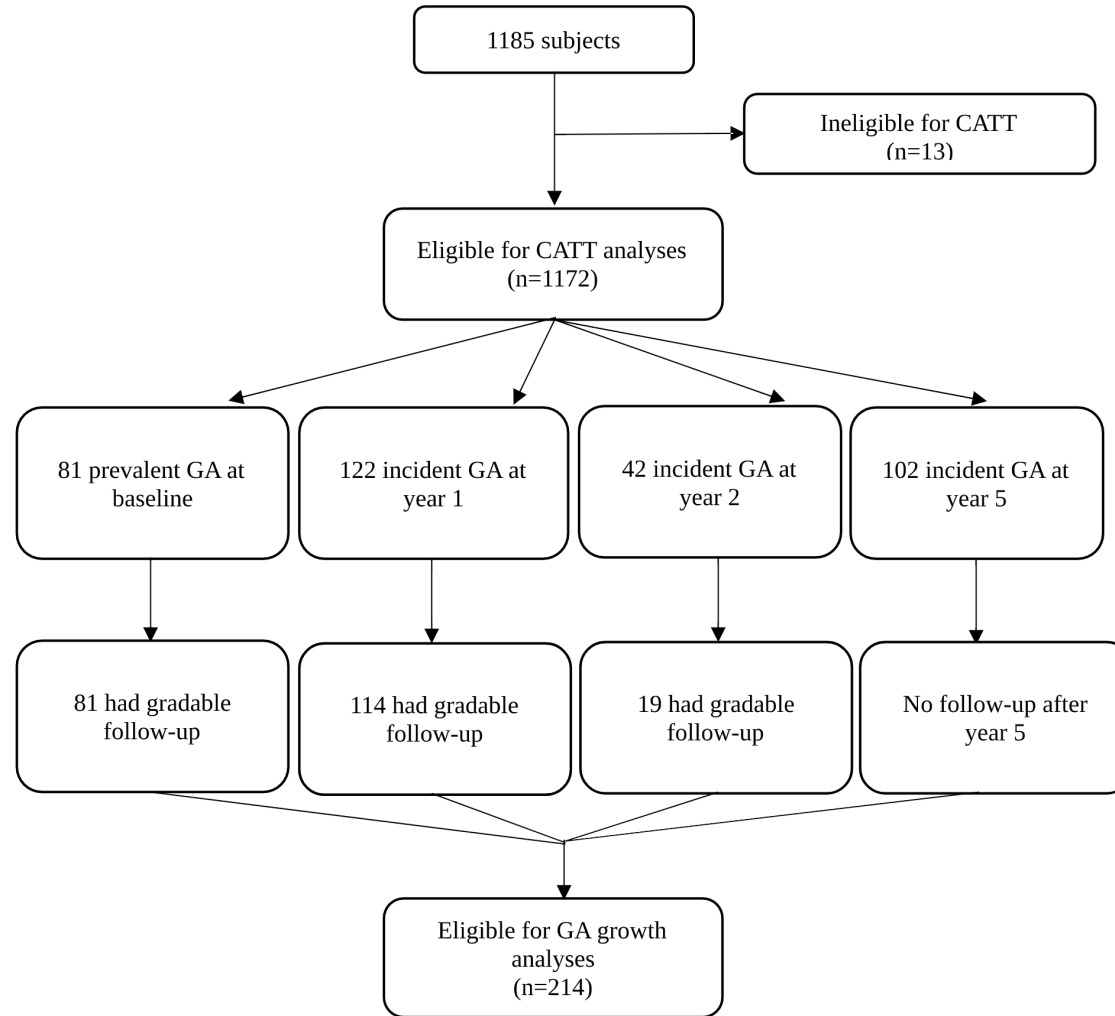

# Flow chart for the study eye GA growth analysis cohort

Scheie Eye Institute

# The baseline characteristics of study eye GA incidence cohort and GA growth cohort

Scheie Eye Institute  
Penn Medicine

Baseline Characteristics	GA Incidence Cohort (N=1011)	GA Growth Cohort (N=214)
Baseline age: Mean (SD)	78.9 (7.6)	80.6 (6.4)
Gender: Female (%)	623 (61.6%)	136 (63.6%)
Smoking Status		
Never	436 (43.1%)	94 (43.9%)
Former	491 (48.6%)	106 (49.5%)
Current	84 (8.3%)	14 (6.5%)
Randomized Treatment Drug		
Ranibizumab	517 (51.1%)	118 (55.1%)
Bevacizumab	494 (48.9%)	96 (44.9%)
Baseline visual acuity in study eye (letters): Mean (SD)	60.7 (13.4)	59.4 (13.1)
Baseline GA in fellow eye: yes (%)	87 (8.7%)	63 (29.7%)
Baseline study eye CNV area (DA): mean (SD)	2.5 (2.5)	2.5 (2.6)
RAP lesion in study eye: yes (%)	112 (11.2%)	38 (17.8%)
Hemorrhage in study eye: yes (%)	606 (60.4%)	155 (72.4%)
Sub-RPE fluid in study eye: yes (%)	495 (53.0%)	106 (53.8%)

# The association between baseline medication use with 5-year incidence of GA (N=1011)

Systemic medications taken at baseline	Medications No	Medication Yes	Multivariable Analysis*	
	Crude GA incidence in study eye (%)	Crude GA incidence in study eye (%)	Adjusted HR (95% CI)	p-value
Cholinesterase inhibitor	257/994 (25.9%)	8/17 (47.1%)	1.65 (0.80, 3.43)	0.18
ACE inhibitors	142/542 (26.2%)	123/469 (26.2%)	1.12 (0.87, 1.45)	0.38
Calcium channel blockers	189/736 (25.7%)	76/275 (27.6%)	1.17 (0.89, 1.54)	0.27
Beta-blocker	176/674 (26.1%)	89/337 (26.4%)	1.01 (0.78, 1.32)	0.93
Diuretics	158/593 (26.6%)	107/418 (25.6%)	1.00 (0.77, 1.29)	0.98
Aspirin	163/584 (27.9%)	102/427 (23.9%)	0.91 (0.70, 1.18)	0.48
Steroids	232/885 (26.2%)	33/126 (26.2%)	1.29 (0.87, 1.90)	0.21

\* Using no medication as reference group, adjusted by age, smoking status, drug, treatment regimen, baseline visual acuity in study eye, baseline CNV area, RPA lesion, GA in fellow eye, subretinal tissue complex, intraretinal fluid, subretinal fluid, and AREDS severity scale.

# The association between baseline medication use with 5-year incidence of GA (N=1011)

	Medications No	Medication Yes	Multivariable Analysis*	
Systemic medications taken at baseline	Crude GA incidence in study eye (%)	Crude GA incidence in study eye (%)	Adjusted HR (95% CI)	p-value
Statin	130/515 (25.2%)	135/496 (27.2%)	1.19 (0.92, 1.53)	0.18
Iron medication (all doses)	259/996 (26.0%)	6/15 (40.0%)	1.52 (0.68, 3.42)	0.31
Iron medication (50mg or more)	261/1001 (26.1%)	4/10 (40.0%)	1.86 (0.69, 4.99)	0.22
Iron supplements	228/868 (26.3%)	37/143 (25.9%)	1.15 (0.80, 1.65)	0.46
Hormone replacement (females only)	253/977 (25.9%)	12/34 (35.3%)	1.35 (0.76, 2.41)	0.31
Drug targeting G protein coupled receptors	239/906 (26.4%)	26/105 (24.8%)	0.98 (0.64, 1.51)	0.94
Antacid	247/954 (25.9%)	18/57 (31.6%)	1.20 (0.74, 1.93)	0.47

\* Using no medication as reference group, adjusted by age, smoking status, drug, treatment regimen, baseline visual acuity in study eye, baseline CNV area, RPA lesion, GA in fellow eye, subretinal tissue complex, intraretinal fluid, subretinal fluid, and AREDS severity scale.

# The association between baseline medication with GA growth during 5-year CATT (N=214)

Systemic medications taken at baseline		Frequency (%)	Univariable Analyses		Multivariable Analyses*	
			Mean GA Growth Rate mm/year (SE)	p-value	Mean Growth Rate mm/year (SE) <sup>1</sup>	p-value
Calcium channel blockers	Yes	58 (27.1%)	0.38 (0.05)	0.06	0.40 (0.05)	0.02
	No	156 (72.9%)	0.31 (0.02)		0.30 (0.02)	
Steroids (Oral)	Yes	5 (2.3%)	0.57 (0.12)	0.04	NA	NA
	No	209 (97.7%)	0.32 (0.02)		NA	

\*Adjusted by drug, treatment regimen, baseline GA in fellow eye, hemorrhage, and sub-RPE fluid.

Scheie Eye Institute

Penn Medicine

# Conclusions:

- In the eyes treated with anti-VEGF for exudative AMD, no significant association between GA development with cholinesterase inhibitor, ACE inhibitors, calcium channel blockers, beta-blockers, diuretics, aspirin, steroids, statins, hormone replacement therapy, antacids, and drugs targeting G protein-coupled receptors.
- Calcium channel blockers were associated with higher growth rate of GA, which requires validation in future studies.
